

Colpocoryphe grandis (Steiniger, 1831) (TH293)

Colpocoryphe → Phacopida → Calymenina → Calymenoidea → Calymenidae

Provenance : Morocco; 'Mount Issoumour near Alnif'

Formation : ?Ktaoua Fm

Age : Upper Ordovician, Katian

Details : Complete specimen, from the calcareous schists below the nodular layers in which ***Flexicalymene ouzregui*** (TH12) is found. 'Mount Issoumour near Alnif' is a completely wrong identification of the find place, as the whole of Djebel Issoumour is in fact Devonian (Upper Emsian to Eifelian & borderline Givetian). More likely, the find place was Djebel Tiskaouine (positioned West of the Issoumour mountain range). Detail images on anterior part of cephalon, with cephalic doublure (last image).
