

Hamatolenus vincenti Geyer & landing, 2004 (TH122)

Hamatolenus → Redlichiida → Redlichiina → Ellipsocephaloidea → Ellipsocephalidae → Protoleninae

Provenance : Morocco; "Oued Ougnat"

Formation : ? (most probably Jbel wawrmast Fm)

Age : Lower Middle Cambrian

Details : Complete but disarticulated (posterior portion of thoracopygidium is lodged underneath the cephalothorax) specimen, somewhat damaged. Very possibly, this is a fake. Note some deviations : genal spines longer than usual with glabella less broad; librigenae seem to be sculpted & painted; "body" of the animal is also thinner than usual. I have not been able to ascertain an alternate identity for this specimen.

Bought on : 15/03/2015

Bought at : Atheneum Voskeslaan, Ghent

Event : Nautilus 2015
