

Morroconites malladoides Struve in Boucot et al., 1989 (TH139)

Morroconites → Phacopida → Phacopina → Acastoidea → Acastidae → Morroconitinae

Provenance : Morocco; Djebel Oufetene

Formation : ? Fm

Age : Middle Devonian

Details : Complete specimen, bought at low cost, from the same vendor as 138. *Kayserops magnispina*, and it is therefore not completely unthinkable that the latter got it (during his last trip to Morocco) from the same Moroccan prepper. Although some limonisation is visible on the third and forth segment of the rachis (axial part of the trilobite), I can see some skid marks and hits as well, leaving me to think that the prepper indeed worked against time to get the prep done.
