

***Asteropyge* sp.** (TH617)

Asteropyge → Phacopida → Phacopina → Acastoidea → Acastidae → Asteropyginae

Provenance : Belgium, "Couvin region"

Formation : Vieux Moulin Mbr in Jemelle Fm

Age : Middle Devonian (Lower Eifelian)

Details : (Positive/negative of) a somewhat eroded pygidium. Sorry about the bad quality of the images (I do my photography by counter-daylight, and that day the sun simply didn't shine). Also, I made a possible mistake in the positioning of the part/counterpart in the first image (now depicting the part containing the least amount of exoskeleton on the left)...but it was with the afterthought that, possibly, that "part" might hide more than the pygidium. A prep session is waiting to be done... (when concluded I'll simply replace this file with inclusion of the prep and necessary correction). Might be of ***Asteropyge filoxenia*** van Viersen et al., 2019.

Gotten at : Bibliotheek, Sint-Gillis-Waas

Event : BVP 2023

Here's the counterpart (with the most amount of exoskeleton)
 ...and a detail image on the pitted prothorax (= trilo-specialist
 word for "surface detail(s)") of the pygidium (see next page).
