

Reedops pembertoni McKellar 2009 (TH173)

Reedops → Phacopida → Phacopina → Phacopoidea → Phacopidae → Reedopsinae

Provenance : Morocco; Atchana

Formation : Ihandar Fm

Age : Lower Devonian, Pragian

Details : Complete, enrolled, specimen. There's definitely something wrong with this specimen: they've coated the exoskeleton (plus parts of the matrix as well) with some kind of wax or varnish. However, I didn't have the species in the collection yet.

Bought on : 06/09/2015

Bought at : Harelbeke, CC Het Spoor

Event : Lithos 2015
