

Diacalymene diadermata (Barrande, 1846) (TH125b)

Diacalymene → Phacopida → Calymenina → Calymenoidea → Calymenidae

Provenance : Czech Republic; Svaty Yan pod Skalou

Formation : ? Fm

Age : Silurian

Details : Weathered pygidium on piece also holding hypostome of ***Cheirurus insignis*** (TH365). Definitely from an old collection, as the site of origin is now heavily protected as national heritage. A friend vendor was offered a box of Czech trilobites (mostly bits), and asked me to make an evaluation of the content (some tags had been displaced). In the end, I was offered the box at the little money I had left that day. [According to biolib.cz, the species occurs in the Motol Fm, of Sheinwoodian-Homerian age (?Middle Silurian)].
