

***Marsaisia* sp.** (TH591)

Marsaisia → Redlichiida → Redlichiina → Redlichioidea → Saukiandidae

Provenance : Morocco; Tazemmourte

Formation : ? Fm

Age : Lower Cambrian

Details : Almost complete specimen (missing librigenae). Close-up images were made with different lighting angles in an effort to show more surface details (showcasing the fact that part of the trilobite – the pygidium and some thoracic spines on the right side – is still hidden under matrix, and that there's a slight damage on the axial lobe).
