

***Trimerocephalus interruptus*** Berkowski, 1991) (TH377a)

***Trimerocephalus*** → Phacopida → Phacopina → Phacopoidea → Phacopidae → Phacopinae

**Provenance** : Poland, Holy Cross Mountains, vicinity of Kielce

**Formation** : ? Fm

**Age** : Upper Devonian (Famennian)

**Details** : Specimen not only shows crushed glabella, but is also missing its pygidium (therefore must be a moult). As the prep leaves to be desired (plenty of matrix still on exoskeleton, the incompleteness of the specimen most probably stopped the prepper from doing a more decent job. Addition to the collection thanks to Laurent Zimmer.

**Gotten on** : 27-28/11/2021

**Gotten at** : Namur Expo, Namur

**Event** : Namineral 2021
