

Colpocoryphe thorali Dean, 1966 (TH176b-c)

Colpocoryphe → Phacopida → Calymenina → Calymenoidea → Calymenidae → Calymeninae

Provenance : France; Montagne Noire

Formation : Landeyran Fm

Age : Lower Ordovician

Details : Complete specimen (as internal & external moulds). Used to be an exhibit piece at the "Maison du Cambrien" (Berlou, Saint-Chinian vicinity)

Bought on : 21/06/2023

Bought at : Val2, Sainte-Marie-aux-Mines

Event : SmaM 2023

First detail images are of the piece left in the image above (internal mould).

And as you can see in the additional images below (pictures taken with different lighting angles), there's actually an incomplete second specimen just underneath.

And here's the counterpart with the external mould...
 ...which, in the detail images below looks rather like the internal mould
 (an optical illusion which occurs quite frequently).
