

Solenopleuropsis (Manublesia) cf. simula (Szduy, 1958) (TH635 + 635a)

Manublesia → Aulacopleurida → Solenopleuridae

Provenance : Spain; province of Saragoza, Daroca area

Formation : Badules Fm

Age : Middle Cambrian

Details : I'm uncertain as to what can be seen on this stone, but it looks like 2 (?partial) cephalata. There's also partial thorax sklerites from a sizably larger (and here undetermined) trilobite (top left and bottom right corners of the stone), images of which can be found on the second page of this file.

The piece was a gift from **Benedikt Magrean**, whom felt that it would be best at home with a systematic collector, rather than with a random buyer.

Gifted on : 3-5/11/2023

Gifted at : Palais du Congrès, Liège

Event : Intermineral 2023
