

Dalejeproetus sp. 1 → ?*Lepidoproetus maharchianus* (TH128)

Dalejeproetus → Proetida → Proetina → Proetoidea → Proetidae → Cornuproetinae

POSSIBLE CORRECTION : *Lepidoproetus* → Proetida → Proetina → Proetoidea → Proetidae → Cornuproetinae

Provenance : Morocco; "Foum Zguid" (more probably North side of Jbel Gara el Zguilma)

Formation : Timrharrhart Fm

Age : Upper Emsian or Lower Pragian

Details : Complete specimen showing medium prep quality, most probably due to bad condition of preservation. Resembles *Diademaproetus praecursor*, but has these "bumps" on the posterior median thoracic segments. I do not exclude the possibility that I may have been wrong in re-identifying this specimen. In fact, Hervé Toubanc feels this as a possible *Lepidoproetus* (*L.*) *maharchianus*.
