

Proetidae gen. & sp. indet. (TH380)

Proetidae = ***Gerastos*** → Proetida → Proetina → Proetoidea → Proetidae → Proetinae

**Provenance** : Morocco; "Tabamkhloft on Djebel Issoumour"

**Formation** : ? Fm

**Age** : Devonian

**Details** : Bought for prepping. What interested me was the small size of the librigenal spine (note : the top bit may have gotten lost in the opening of the stone) which clearly does NOT put this specimen into the Cornuproetinae (***Cornuproetus***, ***Dalejeproetus***, ***Lepidoproetus***, ***Montanoproetus***, ***Sculptoproetus***). Prep revealed the specimen to be a nice ***Gerastos*** (here listed under a separate number). Note the small node in the middle of the occipital ring.

**Bought on** : 23/03/2019

**Bought at** : Alnif, Morocco

**Event** : Trilobite Hunt trip 2019
