

Angelina sedgwickii Salter, 1859 (TH287)

Angelina → Olenida → Olenina → Olenoidea → Olenidae → Triarthrinae

Provenance : UK; Northwest Wales, Porthmadog, Y Garth Hill

Formation : Upper Mudstone Mbr of Dol-cyn-afon Fm

Age : Lower Ordovician, Tremadocian

Details : Positive/negative of almost complete specimen...with extra thorax exuviae of bigger trilobite (I was actually present when this trilobite was extracted from the earth). First detail images are of the internal mould. Below the detail images of its counterpart, exuviae seem on 'part' stone.
