

Phillipsia gemmulifera (?De Koninck, 1842-44) (TH372)

Phillipsia → Proetida → Proetina → Proetoidea → Proetidae

Provenance : Belgium; Soignies

Formation : ? Fm

Age : Carboniferous, Tournaisian

Details : I was attracted by this specimen because of its large size for a Belgian ***Phillipsia***, and noticing it came from Soignies, I thought it might be a ***Ph. belgica ornata***, so imagine my pleasant surprise when I found it it's a different species (and gotten at a really nice price as well) and addition to the collection. Now, the hunt is open for a complete one, heheheh! Bought as ***Phillipia genulifera***.
