

Anataphus vigilans (Meek & Worthen, 1975) (TH607)

Anataphrus → Asaphida → Asaphina → Asaphoidea → Asaphidae → Isotelinae

Provenance : USA, Iowa, Fayette County

Formation : Maquoketa Fm, Clarmont Mbr

Age : Upper Ordovician

Details : Enrolled specimen from an old collection, bought as *Anataphrus virgilans* (sic!). I've had a bit of confusion with the genus name (and its Family-Order placement), as apparently it used to be known as *Vogdesia*. The genus has affinities to both *Isotelus* and *Homotelus*, and the species is usually found enrolled (prone specimens being rather rare). First 3 images of dorsal views, then a frontal view, last 2 images of lateral sides. Species previously known under the genus name *Vigilans*.
