

## Proetida fam., gen. & sp. indet. (TH177)

Proetida → Proetida → Proetina → Proetoidea → ?

**Provenance** : Kazakhstan

**Formation** : ? Fm

**Age** : Carboniferous

**Details** : Complete specimen. Trilobite digging in Kazakhstan is a weird business. Being apprised of a site containing trilobites, a group of diggers will fly over in a large helicopter to get to the usually hard-to-reach place, work there for up to 2 weeks to exploit the layer, then fly home to commercialise the finds. Needless to say, one needs to be around when specimens come onto the market, as the costs to finance another expedition are quite high, and exploited sites are rarely visited again.

**Bought on** : 01/02/2016

**Bought at** : Frituur Fonske, Leuven

**Event** : Non-fair purchase
