

“Phacops hudsoni” (TH565)

Phacops → Phacopida → Phacopina → Phacopoidea → Phacopidae → Phacopinae

Provenance : USA; Oklahoma, Clarita

Formation : ? Fm

Age : Lower Devonian

Details : Near-complete, outstretched specimen, regrettably a bit eroded. From old collection. Having found no author or even reference to this “species”, and seen the sad preservation, I have some serious doubts as to the identification’s validity. However, as things are, I’ll abide by it anyway (personally, I would’ve used the ID tag “Phacopidae indet.”.)
