

***Reedops cephalotes hamlagdadianus*** Alberti, 1983 (TH142)

**Reedops** → Phacopida → Phacopina → Phacopoidea → Phacopidae → Reedopsinae

**Provenance** : Morocco; Djebel Issoumour

**Formation** : ? Fm

**Age** : Lower Devonian, Pragian

**Details** : There's been possible amateuristic prepping on this specimen (exoskeleton of the glabella was transfixed improperly, and bits of exoskeleton of the pygidium apparently did not survive extraction from the matrix), yet otherwise this is a fine piece indeed. Note the fine granulation all over the body and the perfectly prepped eyes.

**Bought on** : 06/09/2015

**Bought at** : Sint-Gillis-Waas

**Event** : BVP 2015
