

***Reedops* sp.** (TH320)

Phacopid → Phacopida → Phacopina → Phacopoidea → Phacopidae → Reedopsinae

**Provenance** : Morocco; Meseta Casablanca Est

**Formation** : ? Fm

**Age** : Lower Devonian

**Details** : Complete specimen. As mentioned before, trilobites from the Meseta Casablanca Est suffered from erosion (limonisation), and all that's really left are the internal moulds. Although the length of this specimen alludes to *R. maurulus*, I prefer to give it a different numbering, awaiting positive identification (Oh yes, there's still a lot of work to be done on Moroccan trilobites!). Eye detail is on right eye

**Bought on** : 19/06/2018

**Bought at** : Sainte-Marie-aux-Mines

**Event** : SMaM 2018
