

Skreiaspis spinosa (Pompeckj, 1895 as *Agraulos spinosus*) (TH604 + 604a)

Skreiaspis → Redlichiida → Redlichiina → Ellipsocephaloidea → Ellipsocephalidae

Provenance : Czechia; Rejkovice

Formation : Jince Fm, *Acadolenus snadjiri* Zone

Age : Cambrian (Wuluian)

Details : Near-complete specimen (internal mould misses small bit on left side of thorax and pygidium; part probably lost during extraction from rockside) as part-counterpart moulds. In the external mould part (see last detail image), there's even more missing from that side of the fossil. Scale = 5mm/square.
