

Paciphacops logani (Hall, 1860) (TH564a)

Paciphacops → Phacopida → Phacopina → Phacopoidea → Phacopidae → Phacopinæ

Provenance : USA; Oklahoma, Clarita

Formation : ? Fm

Age : Lower Devonian

Details : Complete specimen with tucked-in pygidium (most probably a molt). From old collection (bought as *Phacops logani*). Additional info from own files (not on purchase ID-card) Clarita is in Coal County; the species (which is not as common as Oklahoma's other *Paciphacops*, *P. campbelli* from the Haragan Fm) is found in the Bois d'Arc Fm (and therefore slightly younger than the latter named). The specimen would benefit greatly with some extra sandblasting, and I'm sure that one day I'll do just that!
