

Piltonia kuehnei (Hahn, 1964) (TH371 + 371a-c)

Piltonia → Proetida → Proetina → Proetoidea → Phillipsiidae

Provenance : Belgium; Vaulx dump site

Formation : ? Fm

Age : Carboniferous, Tournaisian, Ivorian Stage

Details : Complete specimen with slight disarticulation. Backside of the piece shows a(n) at least partial thoracopygidium (might be fun trying to find out whether there's more underneath the matrix) and two more pygidia, somewhat weathered (and in one case only partially visible).
