

***Actinopeltis* sp.** (TH231)

Actinopeltis → Phacopida → Cheirurina → Cheiruroidea → Cheiruridae

Provenance : Morocco; "Zagora area"

Formation : Fezouata Fm, Zone a *Onnia*

Age : Ordovician

Details : Part & counterpart of an originally assumed incomplete individual (I thought the librigenae were missing). The stone(s) contains several trinucleid cephalon parts (presumably *Onnia*). In the first image you get the part on the left side, the counterpart (external impression) on the right. That chronology is kept in the images underneath. Next page some images of the trinucleid remains.
