

Cheirurus insignis Beyrich, 1845 (TH365)

Cheirurus → Phacopiida → Cheirurina → Cheiruroidea → Cheiruridae

Provenance : Czech Republic; Svati Jan pod Skalou

Formation : ? Fm

Age : Middle Silurian

Details : Hypostome (somewhat weathered) on same stone also containing a pygidium of ***Diacalymene diadermata*** (TH125a). [According to biolib.cz, the species is found in the Sheinwoodian (Homerian) Motol Fm (?Middle Silurian)] A friend vendor was offered a box of Czech trilobites (mostly bits), and asked me to make an evaluation of the content (some tags had been displaced). In the end, I was offered the box at the little money I had left that day. Definitely from an old collection, as the site is now heavily protected under National Heritage Laws.
