

***Struveaspis cf. micromma*** (Roemer, 1852) (TH204)

***Crozonaspis*** → Phacopida → Phacopina → Dalmanitoidea → Dalmanitidae → Zelliszkellinae

**Provenance** : Morocco; Jorf 'White Site'

**Formation** : ?Boutchafrine Fm

**Age** : Middle Ordovician, Pragian

**Details** : Complete specimen, from private collection. This wacky Phacopid with diminished amount of eyes measures just over 80 mm long, making this particular specimen rather large for the species. Now rather hard to find on the fossil fair too. Not exactly perfectly prepped, and I even have the feeling that on the left side, the cephalon was treated with some kind of non-coloured transparent resin (to give it a semblance of completeness)

**Bought on** : 05/06/2016

**Bought at** : Comblain-au-Pont

**Event** : Non-fair purchase
