

Eldredgeops rana (Green, 1832) (TH551a)

Eldredgeops → Phacopida → Phacopina → Phacopoidea → Phacopidae → Phacopiniae

Provenance : USA; New York State, Erie County, Hamilton

Formation : ? Fm

Age : Middle Devonian (Givetian)

Details : Complete specimen, with weird “emrollment”. Most probably from the Moskow Fm (species also reported from the Mahantango Fm, which is equally present in the New York state – as well as in Maryland, New Jersey, Ohio, Pennsylvania, Virginia, and West Virginia). Specimen was part of a box set (which included some new species for the collection). Detail image on eye on next page is of that on the right side of the cephalon.
